BRIMS

Banking regulatory reporting and integrated MIS

OVERVIEW

Tools that deliver visually engaging business insights quickly help us leverage every piece of our data asset. And, if we can enable this process without huge manual effort, massive upfront costs, painful configuration, setup, and maintenance, more people will arrive at better insights sooner.

Banking Regulatory Reports and Integrated MIS (BRIMS) is a tool that provides a bank's business users the capability to draw meaningful insight from data for decision making, besides automatically generating reports in various formats (XBRL, xls, pdf) for regulatory reporting.

BRIMS is an integrated and scalable reporting solution offering a comprehensive single window to support all the internal and external reporting needs of a bank.

ABOUT US

C-Edge Technologies Ltd. Is a leading Technology, Infrastructure and Service provider to financial institutions in India and abroad.
C-Edge is a joint venture, between Tata Consultancy Services Ltd. (TCS) and State Bank of India (SBI), to provide transformational capability to the Indian financial services and emerging markets by addressing major technology needs of this industry.

KEY FEATURES OF C-EDGE BRIMS

> Create preconfigured reports: Comes with nearly 100 reports that cover the gamut of MIS that a bank would need. Most of these reports are delivered into the individual mailbox at the start of the day.

> Define roles and authentication: Single user sign on system that helps users create user roles and assign role-based access to views and dashboards.

> Analyze data: Allows users to build and save views based on measures and dimensions selected. Allows a variety of operations such as mathematical computation, drill-down, slicing of data etc. to gain deeper insight.

KEY FEATURES OF THE SOLUTION

BRIMS is based on the coordination of two data anyalytics engines called iDeal and Zeyga. iDEAL is the Regulatory Compliance Reporting engine of BRIMS. iDEAL is a data transformation tool that picks business reporting data for regulatory submission from an organization's centralized data repository and automatically transforms it to XBRL format as per the defined taxonomies by the Regulator. The transformation is done on the basis of a one-time mapping of source to the taxonomy elements. Reporting entities which have high frequency and high volume of data reporting need automated solutions.The business analytics engine of BRIMS runs on Zeyga. Zeyga is at the intersection of data science and information visualization/exploration. Zeyga provides slick visualization and dynamic dashboards that can be developed in minutes.

BRIMS ADVANTAGE

> Reduced compliance burden: Ready pre-configured reports for statutory and MIS reporting thereby increasing efficiencies.

> Greater visibility and insights: Ability to dynamically analyze and build custom reports/dashboards.

> View on multiple devices (PCs and Handheld).

> Cloud-based, zero client footprint, zero capital investments.

> Quick onboarding.
